CHALLENGE

Defining the Technology and Service Delivery Architecture

Project Management to ensure a quick go-live

Evaluating and deploying vendors for Core Banking, Data Center and Network Architecture

APPROACH

Recommend Core Banking and Hosting Solutions that are scalable and cost light

Articulate business requirements for Branch Banking, Wholesale Banking Products, and Treasury

Create a Project Management plan and framework for Governance Plans, Financial Plans, etc. And, steer the project to success.

BENEFIT

The bank was able to go live with its Core Banking solution, the Data center and Network IT Architecture in a record time

The project was delivered to the complete satisfaction of both the regional and the local stakeholders and well within the budgeted expenses
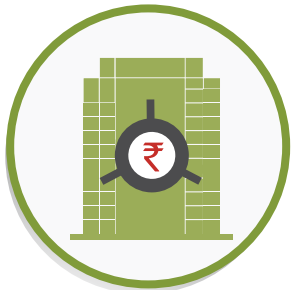

CLIENT

An MNC Bank that wants to set up Banking Operations in India. Has a plan of becoming a leading "trade" bank for its customers in India.

"The team went about conducting and managing the project in a very methodical and professional manner, and helped us accomplish the entire spectrum of tasks including establishing business requirements, technology architecture for business applications and infrastructure (Data Center and Networks), vendor selection across core banking, data center, UAT services, IT procedures and related project management.
What distinguishes the team is their very structured approach, deep domain experience, anticipating issues and providing solutions thereof..."
